Power for a Brighter Future

TAKASAGO WORKS
Improving Society Through Development and Manufacture of Innovative Power Generation Equipment

The TAKASAGO Works was originally set up in 1942 to serve as a system manufacturing plant for the production of basic category components and parts. Today, the TAKASAGO Works has become a single variety of work shop, including high-performance gas turbine power generation units as the main production line. TAKASAGO Works is the model of the most efficient gas turbines available in the market. These and other products have contributed to the advancement of oil-fires and business around the world.
